Rudder - User story #2363

Add a datatable to store version information

2012-03-06 11:46 - François ARMAND

Description

We need to have a table to store information about the current version, as detected by the migration script.

That table would at least store the current XML "fileFormat" version.

Nicolas, can you create a SQL migration file in the rudder project, under rudder-core/src/main/resources/Migration, similar to the other ones, to add this table?

When it's done, don't close this bug, but re-assign it to me (or NPE or MCE, with their agreement) so that we can call the script from the rudder-upgrade script in packaging.

Thanks!

I created the file rudder-core/src/main/resources/Migration/dbMigration-2.3-2.4-add-MigrationEventLog-table.sql in charge to add the new table.

I also modified rudder-core/src/main/resources/reportsSchema.sql to create that table for an installation from scratch - is that the good thing to do, or do we want to always use the migration scripts ?

#4 - 2012-04-25 17:45 - Matthieu CERDA

- % Done changed from 0 to 100

Applied in changeset commit:797ccdbc3fcbd39f0785c7f06cf2f71d7f3782fb.

#5 - 2012-04-25 18:01 - Matthieu CERDA

The migration scripts are only for migrations, during basic installations we should always rely on init files like rudder-core/src/main/resources/reportsSchema.sql. (my two cents)

#6 - 2012-06-05 10:26 - Jonathan CLARKE

- Status changed from Pending technical review to 10

Looks good to me.

#7 - 2012-06-05 10:27 - Jonathan CLARKE

- Status changed from 10 to Released

To clarify this from a functional point of view, it's one of the steps that allows an upgrade from Rudder 2.3 to 2.4 to keep event logs from the previous version, by converting them automatically.
