This problem should be resolved on a higher level, we don't want to fix every regexp field in every technique and maintain that.

We want to change how we check regex constraint by checking if the value contains a variable or not and accepting if this the case.

All possible case:

- Only Value: 192.168.42.1
- Only Variable: ${sys.ipv4}
- Mix of Variable and Value: 192.168.${node.properties[subnet]}.1
