

Rudder - Bug #5071

Debian package management: can't specify a repository (ex: "-t wheezy-backports")

2014-06-18 18:39 - Olivier Chédru

Status:	Rejected	
Priority:	N/A	
Assignee:	Alexis Mousset	
Category:	Techniques	
Target version:	3.1.22	
Pull Request:	https://github.com/Normation/rudder-techniques/pull/452	Priority: 59
Severity:	Major - prevents use of part of Rudder no simple workaround	Name check:
UX impact:		Fix check:
User visibility:	Getting started - demo first install level 1 Techniques	Regression:
Effort required:		
Description Steps to reproduce with Rudder 2.10.2: - Create a directive "APT package manager configuration" (1.0) with the following parameters: - Check "Also add the following package repositories" - Repository 1: URL = http://debian.proxad.net/debian , distribution = wheezy-backports, Use main = Yes - Create a directive "Package management for Debian / Ubuntu / APT systems" (2.0) with the following parameters: - Define package version to install: use criteria below - Package name: rsyslog - Packet version match: == (or >=) - Packet version number: 7.6.3 Assign both directives to the same rule targeting a node running Debian 7.5. The directives stay in the status "Repaired", 0%, with the following details: Performed repair action for deb package rsyslog with policy: update

History

#1 - 2014-06-18 18:42 - Olivier Chédru

Note the Debian repository is properly set in /etc/apt/sources.list.d/rudder-apt.list, but the package is not upgraded.

#2 - 2014-07-10 16:55 - Nicolas PERRON

As far I can see, your repaired status could be due to CFEngine trying to compare a version not matched. The installed version is not ok and older than the promised one, then CFEngine will try to update.
Trying to update could fail/succeed but will send a repaired report. It seems to be the same problem than [#5244](#).

#3 - 2014-07-10 17:23 - Nicolas PERRON

The repository you added seems to have rsyslog 7.6.3 but still not having all required dependencies:

```
[...]
rsyslog depends on libc6 (>= 2.17); however:
  Version of libc6:amd64 on system is 2.13-38+deb7u1.
rsyslog depends on libestr0 (>= 0.1.4); however:
  Version of libestr0 on system is 0.1.1-2.
[...]
```

Maybe this is why rsyslog is never updated. Did you try manually to check if it was possible ?

#4 - 2014-07-10 17:28 - Olivier Chédru

Yes, it was OK.

I used the following manual procedure to upgrade rsyslog on a freshly installed Debian 7.5:

```
echo "deb http://debian.proxad.net/debian wheezy-backports main" >> /etc/apt/sources.list
apt-get update
apt-get -y -t wheezy-backports install rsyslog
```

#5 - 2014-07-15 17:29 - Nicolas PERRON

- Status changed from New to Discussion
- Assignee set to Jonathan CLARKE
- Target version set to 2.6.17

The problem is that "Package management for Debian / Ubuntu / APT systems" is not able to manage packages with backport repositories. APT needs to be configured in order to use backports by default. For example, adding a file /etc/apt/apt.conf.d/myconf containing:

```
APT::Default-Release "wheezy-backports";
```

I see two options:

- Add new version of "APT package manager configuration" to add custom configuration into APT (a textbox where options could be added into /etc/apt/apt.conf.d/99rudder). It seems to me that this is the simplest way and it's flexible.
- Add new version of "Package management for Debian / Ubuntu / APT systems" to add an option if we want to use a backport or not. It seems to me that this is more complex as different package_method would be used in function of being installed by backport or not.

What's your opinion Jon ?

#6 - 2014-07-15 17:43 - Jonathan CLARKE

- Assignee changed from Jonathan CLARKE to Nicolas PERRON

I don't think it's a good idea to change the settings on hosts for apt via a config file. This could have undesired side effects.

However, using the "-t" option as in Olivier's example above looks great.

Sure, it would require a new package_method, but we could pass a parameter to the package method to specify the name to use.

Fixed in [#10241](#) for the "Package" technique, closing.

It is now possible to pass arbitrary options to apt.
